Tarantula	2	2	2	-	2	-	-	2	-	-	-	-	
Piranha	2	2	2	-	2	-	-	2	-	-	-	-	

*Carbo Load is a secondary source of complex carbohydrates and optional if using Bud Candy. **Bud Blood is optional and not necessary if using Bud Ignitor. Use week of or before transition.

- We recommend to start at quarter- or half-strength from what you see on the chart until you are dialed in. Many factors affect uptake.
- Recommended ppm for Soil, Peat & Coco: 1200-1400 (can go a bit lighter in coco)
- Recommended ppm for DWC: 450-500, 600 max; Use cal-mag to reach base of 350 ppm
- Recommended ppm for Flood & Drain Hydroponics: 1000-1200 ppm
- We recommend to dose nutrients in the order of silica, cal-mag, additives, base, pH, and beneficial microorganisms last.
- Advanced Nutrients recommends a base of 350 ppm cal-mag for all growing situations.
